We make sure that you deliver your IT projects successfully

About us

Verax Systems Corp. is a global **software house & solution provider** specializing in IT solutions for the telecommunications, banking and enterprise markets.

Our offering

We make sure that clients deliver their IT projects successfully, on-time and within budgets. Verax Systems' objective is to help **your company** meet growing market challenges by providing a quality offering of **IT professional services**, including:

Application and network performance audits in order to assure that your applications, services and systems are in healthy condition and provide high user experience to the end-users.

Technical consulting ranging from up-front business strategic planning and analysis through systems design, implementation, deployment and support. Once the projects are delivered, we provide **support and maintenance** services according to agreed SLA levels. **Custom software development.** Verax Systems offers comprehensive services at each stage of the project from requirements definition to deployment.

Key differentiators

- **Proven track record** with glowing client references.
- Vast **domain knowledge** of large enterprise, banking and telco markets.
- Formal **project management methodology** for risk-free, on-time and on-budget delivery of world-class solutions to our customers.
- BS7799-compatible security policy ensuring **highest standards of protection for entrusted information** such as customer data.
- Process- and knowledge-driven software development resulting in **high quality** software that is well documented and easily maintainable.
- Strong partnerships with IT market leaders IBM, Oracle, Sun, Adobe, etc.

A process- and standards driven company

In order to **ensure high quality world-class deliverables and consistent project delivery** we employ key industry standards in our project management and software development processes:

- **Project portfolio management software** for tracking of project progress, deliverables issues and risks.
- Knowledge base system for retaining project knowledge.
- Performance Indicators (KPI) **metrics for project delivery** and software development process.
- Advanced software development tools for static and dynamic code analysis and profiling, code metrics, test coverage measurements and others.
- **Formal project management methodology:** standardized project management templates, processes and procedures.

Business benefits

- **Meet deadlines** of complex project engagements – we work as a partner to make sure that you deliver.
- **Augment your competencies**, expertise and skills using Verax Systems' team.
- Bring in technical and domain expertise.
- Enable yourself to deal with difficult assignments.
- **Enable rapid development** by utilizing Verax Systems' skills and experience.
- Reduce project risks and increase efficiency.
- **Increase quality** through our mature software development and Quality Assurance (QA) process.
- **Reduce TCO.** Verax Systems delivers high-quality, documented and tested software that is easily maintainable.
