About us

Verax Systems is an international **software house and solution provider** specializing in OSS/BSS solutions for the communication service providers (CSPs) market.

Our offering

Verax Systems offering allows CSPs to retain ARPU by generating additional revenue streams with rapid enabling of new services and churn reduction via service monitoring. We provide a mixed product and service set in the areas of:

Service and network control, management and metrics. Verax NMS solution allows CSP not only to provide full FCAPS-compliant network monitoring, but also gather network and user experience metrics such as:

- SLA compliance.
- User experience.
- Usage policy compliance.

Verax NMS is an all-in-one solution for monitoring networks, applications and services, including cloud-hosted applications.

For more information please see: veraxsystems.com/en/products/nms.

WiFi and WiMax. We provide solutions for deploying wireless, high speed Internet access with billing, tariff plans, bandwidth management, revenue share models, multiple payment methods, social internet, content integration, data retention services and others.

For more information please see: veraxsystems.com/en/products/SPARK.

Service enabling solutions based on the Verax Systems OSS/BSS Suite focused on:

- Service provisioning and validation of the provisioning process via automated business logic.
- SaaS based provisioning for cloud-based applications.
- Network policy enforcement via AAA management and network edge control.
- Building IP and application focused services from product catalogue level up.

For more information please see: veraxsystems.com/en/products/ossbss.

Custom solution development. Verax Systems has successfully delivered numerous projects for the telecommunications sector, in the areas of:

- Billing and electronic payments.
- WiFi, WiMax and LTE.
- VoIP.
- Revenue assurance and fraud management.
- Application and systems integration.

Why choose Verax Systems?

Rising to the market challenges, Verax Systems has grown to be a forerunner in IT service and solution delivery with a reputation for excellence both in technology and customer satisfaction. Our advantages include:

- Strong background in telecommunications.
- Proven track record of delivering world-class solutions to an international client base.
- Partnerships with market leaders such as IBM, Oracle, Sun, Adobe and others.
- Processes and methodologies ensuring quality of deliverables for mission-critical telecommunications environments.
- Strong product and service offerings enabling client success.
- Strong cooperation with market leaders.
- Commitment to create long-term relations with our customers.
